

## Water Stone SINK

For thirty years **Maine Kiln Works** has been producing the very highest quality bath sinks and basins. Each unit in our **Water Stone** line is carefully designed and tested to match or exceed industry standards. Using a range of specialized tools and processes – we individually form every sink. All are carefully glazed and fired to full vitrification at 2400° Fahrenheit. Our quarter century of continuous production clearly demonstrates an uncompromising commitment to high quality hand craft.

A unique and beautiful product backed by thirty years of continuous production and a full satisfaction guarantee. Hand craft and high quality combine to create an exceptional product that will add a distinctive touch to your custom installation.

# Hand Formed Artisan Sinks

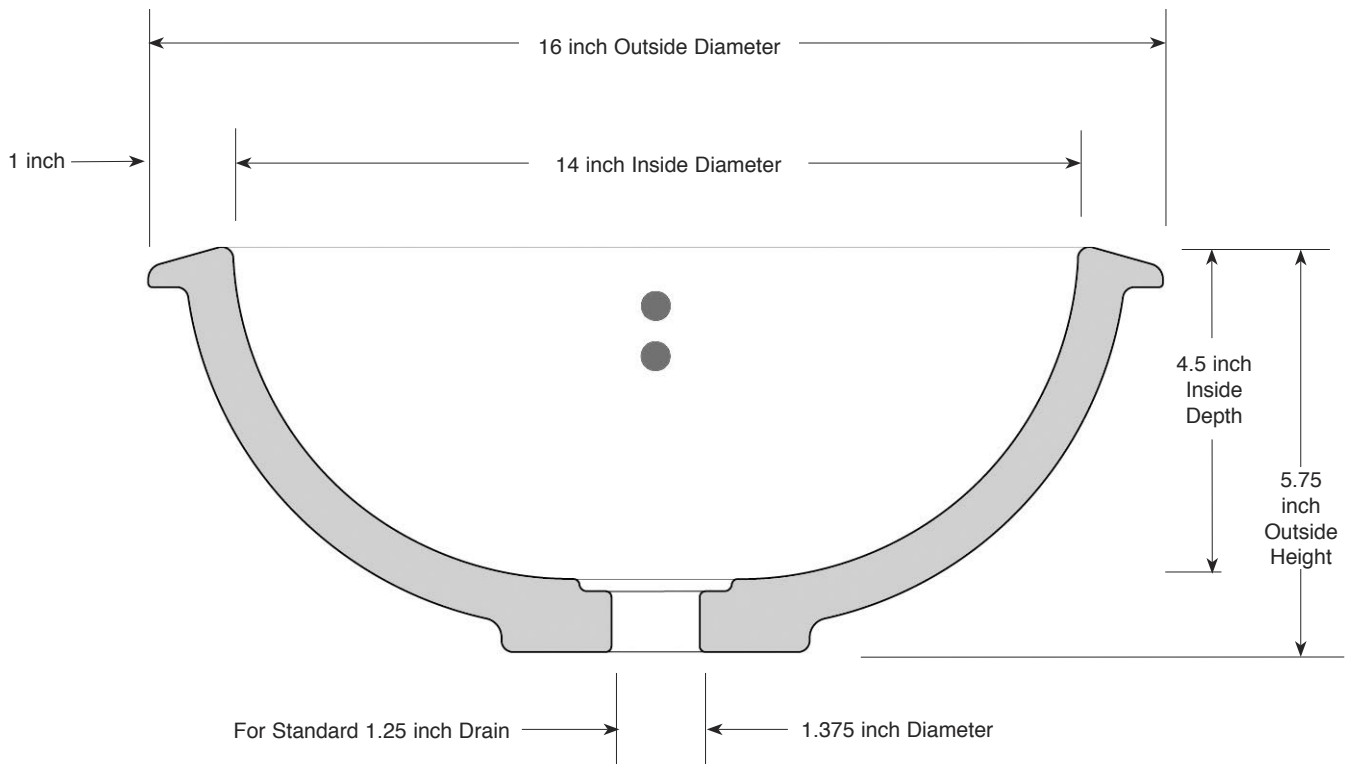

**Unique Design** – Bright color, clean line and precise detail characterize the relaxed simplicity of our bath sinks and basins. The ubiquitous bowl - practical container and universal symbol - finds classic expression in our Water Stone line. As a container for flowing water, our sinks are the simplest of functional forms. Believing that our everyday environment reflects as well as enhances the quality of our lives - our work is focused to bring beauty and utility to the objects that surround us. I have always had an affinity for the simplicity of functional design. With great satisfaction I offer our range of sinks for your everyday use and enjoyment.

**Material Strength** – Our sinks and basins are formed from custom blended stoneware and porcelain clay bodies which are based on sturdy Appalachian fire clays and Florida kaolins. All of our raw materials are carefully graded and chosen to precisely control the fired tensile and compression strength of our product line. Every piece is fired to bisque temperature, carefully glazed and then refired in a reduction atmosphere – to full vitrification at Cone 10 – 2400° Fahrenheit. The strength and durability of every unit is comparable in every way to the vitreous china and whiteware used throughout the sanitary ware industry. All of our sinks are backed with a full satisfaction guarantee. In thirty years of continuous production we have only had one sink returned for exchange due to a raw material flaw beyond our control.

**Hand Crafted Quality** – The qualities of a custom designed and hand formed basin are striking and immediately apparent. Subtle blending of form, function and hand worked detail creates a sense of strength and formal character. Every unit displays unique detailing – reflecting the artisan process. Clay surfaces frequently show finger ridges and inscribed line work which provides opportunities for glaze pooling and rich tonal variation. Our hand formed work is separated from factory production by the depth of surface detail and the broad range of glaze variation and tonal color. We are currently very pleased to expand our range of choices to include classic chun blue and jade green celadon porcelains of extraordinary beauty.
